SIGNAL TREE | Switch channels D0=CSI clock, D1=CSI DATA1, D2=CSI DATA0

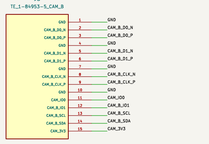

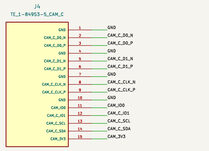

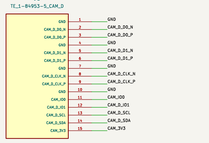

CONTROL / PCA9544A address 0x70; individual downstream I2C buses

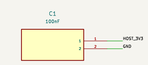

POWER / regulated external 3.3V, current-limited supply; common ground

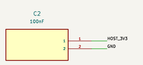

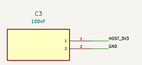

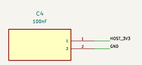

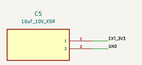

DECOUPLING AND CONTROL | 10k GPIO pulls disable both leaf switches at reset

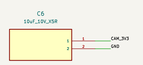

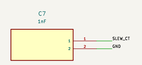

A: GPIO4/18/17 = 0/1/0; B = 1/1/0; C = 0/0/1; D = 1/0/1

Camera IO0 is common for probing. IO1 links R16–R19 are DNP pending camera-specific review.

R6/R7 DNP: host pull-ups normally present. Check parallel module pull-ups before fitting R8–R15.

Not fabrication released: validate routing, SI, power and software
Two CSI data lanes; ONE selected camera: separate 3.3V camera supply
Simon hardware example
